Rotoplas lays the foundation stone for the new plant in Ixtapaluca

Grupo Rotoplas S.A.B. de C.V. ("Rotoplas", "the Company" or "the Group") (BMV: AGUA*), the leading provider of water-solutions in the Americas, announces the start of construction for the new plant in the Metropolitan Area of the Valley of Mexico. This milestone aligns with the first strategic point of the CEO's agenda presented during AGUA Day, "Sustainable Growth of the Traditional Business," and reaffirms the commitment to innovation and sustainability.

The new facility, designed to replace Rotoplas' first rotomolding plant in Mexico City and set to open in the fourth quarter of 2024, will enhance production capacity and allow for the implementation of more advanced and sustainable technology in the manufacturing of storage systems like the Tinaco Plus+. This plant will also serve as a distribution center for accessories and components for the waterflow category.

The plant is strategically positioned to strengthen presence in central Mexico and to meet market demand. Additionally, thanks to its infrastructure, planned to maximize efficiency in resource use such as energy and gas, waste minimization, and the adoption of systems for rainwater treatment and collection, these facilities will be LEED certified, symbolizing our commitment to sustainability and operational excellence.

"This project reflects our vision for the future and our commitment to continuous improvement, supporting the development of solutions that ensure access to quality water for everyone while improving operating conditions for our employees," commented José Luis Mantecón, Vice President of Sustainability and Human Capital, during the event.
